The world's smallest,
lightest Inmarsat UAV
satcom solution at 1.45kg

AVIATOR
COBHAM

Connectivity for Unmanned Air Vehicles

AVIATOR UAV 200, a revolutionary new solution from Cobham, redefines UAV satcom connectivity by integrating everything into one compact, lightweight box.

Weighing just 1.45kg, AVIATOR UAV 200 is a remarkable 76% lighter than anything comparable on the market - yet still delivers Inmarsat Class 4 services, up to 200kbps data and near real time control of data channels. Real time surveillance just got lighter!

Tactical UAVs depend upon lightweight components to maximise range, endurance and operational use. However, until now, the size, weight and power requirements of Inmarsat satcom hardware made it impossible to take advantage of the higher speed connectivity from today's satellite networks on smaller UAVs.

Weight and size-optimised for
small tactical UAVs

Features

KEY BENEFITS

- Beyond Visual Line Of Sight (BVLOS) communications
- Real time control of aircraft over satcom
- Real time navigation with telemetry over satcom
- Real time health monitoring
- View near live video & imagery
- Dynamic aircraft re-routing

FEATURES

- Weight: 1.45kg (nearest model: 6.1kg)
- Power: 28W (nearest model: 73W)
- Size: 1 box solution (nearest model: 3 boxes plus cables)
- Sufficient bandwidth for flight control over full aircraft range and endurance
- Payload flexibility (due to size, weight and power savings)

Specification

SPECIFICATION

- Single Line Replaceable Unit solution
- Mounted within the airframe
- Class 4 SwiftBroadband offering full Inmarsat hemisphere coverage to 5° elevation
- Background data service up to 200kbps
- Streaming class services up to 180kbps with half HDR
- User class context control
- System BITE

INTERFACES TO AIRCRAFT

- DC Power (14 - 28VDC)
- Nav in via RS-232 or Ethernet

USER INTERFACES

- 2 x Ethernet
- 2 x RS-232

MECHANICAL OVERVIEW

- Single box solution
- Weight 1.45kg
- Dimensions: 24 x 16 x 6cm
- Mid-flange for ground plane and heat management
- Micro-D connector interface
- Protected user-accessible USIM

The world's smallest, lightest Inmarsat UAV solution

Reliable

Inmarsat's networks are renowned for their reliability with proven availability above 99.95%.

Global

SwiftBroadband is available globally except for extreme Polar regions.

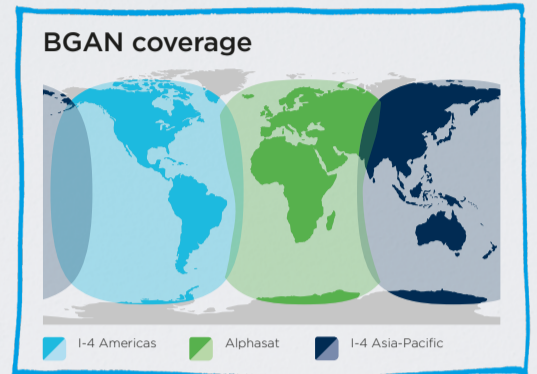

Secure

Compatible with government-grade encryption and secure communications standards, STU-IIIIB, STE, TACLANE, KIV-7 and BRENT.

The AVIATOR UAV 200 connects back to base via Inmarsat's SwiftBroadband service, providing a reliable command and control communications link beyond line of sight, as well as a real time feed from on-board payload sensors, via a single channel 'always-on' data service up to 200kbps. Streaming class services are also available.

Extended range and endurance

Benefits

Beyond line of sight

For true surveillance and monitoring, it is vital that operators get near real time visual feedback of the video captured. Previously, tactical UAVs had limited connectivity, meaning that all viewing and decision-making had to be within line of sight or after the airframe returned, by which time the data will often have lost its tactical or commercial value.

Enhanced aircraft control

With AVIATOR UAV 200, operators can now send flight commands to the UAV in real time. By making immediate route adjustments as and when necessary, not only does this significantly enhance mission flexibility but it can help to protect the UAV and other airspace users should it need to avoid potential threats or return to base.

Greater payload flexibility

A tactical UAV's combined weight has a large impact on its endurance and operational flexibility. By providing a satcom solution that is smaller and lighter than anything bandwidth-comparable on the market, AVIATOR UAV 200 not only improves the UAV's range but significantly expands its payload capability and thereby its commercial and strategic value.

Receive time-critical data in near real time
